MeLamp Aurora

MeLamp Aurora

Aurora is a lighting system made of thin, finely engraved metal sheets. Its lightness and variety of models make for a versatile object, a special shape of light, suitable for your home, designer environments and exhibition areas. Designed by Nucleo_Piergiorgio Robino + Edoardo Trave, Aurora is part of MARCA design collection, made in Torino.

Aurora's innovative, subtle design comes to life in your hands. Its metal disk comes in a flat pack, and can then simply and quickly be shaped by hand to achieve the look you want. Let your imagination run wild and be your own light designer.

A wide range of combinations and shapes may be achieved, also combining more than one disk, so that each object is truly unique. For inspiration in shaping the Aurora disk follow us on Facebook and YouTube or visit www.cainodesign.com.
